MODULE 5

THE LEADER AS VISIONARY AND MOTIVATOR

Sedef YENICE

IFCC EMD - Committee on Clinical Laboratory Management (C-CLM)
CONTENTS OF THIS MODULE*

► Definitions of Motivation
► Extrinsic and Intrinsic Motivation
► Spectrum of Motivation
► Theories of Motivation
► Work Climate
► Motivational Drivers
► Benefits of Motivation
► Management of Motivation and Performance

*) All pictures and images in this module are from Microsoft Office Clip Art Gallery, Google search images, unless otherwise noted.
LEARNING OBJECTIVES

By completing this module, participants will be able to:

- Describe what motivates individuals
- Describe what external motivation and internal motivation are
- Describe the optimal motivation and motivational drivers
- Describe the six motivational outlooks
- Understand the appraisal process
- Describe and compare the content theories of motivation
- Define work climate and explain its influence on laboratory staff performance
- Explain how supervisors can influence a work group’s climate
- List at least five benefits of motivating staff
- Explain how to analyze performance-motivation problems
- List at least four indications/signs of low motivation and performance
- Describe tips for motivating the staff
- List at least five best ways to motivate staff
- List at least six exalting phrases to motivate staff
What is Motivation?

- Motivation is widely regarded as a psychological state that compels an individual to act toward a desired goal and elicits, controls, and sustains certain goal-directed behaviors. It can be considered a catalytic force or the energy to act upon or toward a desired goal. In fact, there are more than 100 definitions linked to the concept of motivation. But they share the same fatal flaw: They focus on the quantity of motivation a person has rather than the quality of motivation a person has*.

- Motivation results from the interaction of both conscious and unconscious factors such as the (1) intensity of desire or need, (2) incentive or reward value of the goal, and (3) expectations of the individual and of his or her peers. These factors are the reasons one has for behaving a certain way.

- An example to the quality of motivation is a laboratory technician that spends extra time working for validation of a new analytical method because he or she wants better results of internal quality.

What Leaders and Individuals Need to Understand About Motivation—Why It Matters?

To motivate individuals, it is important to understand their needs. Effective leaders build and shape organizations that motivate their employees’ minds, spirits, and actions.

People are always motivated. The question is not IF but WHY they are motivated.

What leaders can do is use best practices that promote a higher-quality motivation that sustains people’s positive energy, vitality, and well-being, or what is called optimal motivation*.

*) Read more: http://www.kenblanchard.com
**What are the Motivational Drivers?**

**Optimal motivation** is the experience of satisfying one’s psychological need for autonomy, relatedness (purpose), and competence (mastery) in the pursuit and achievement of meaningful goals that lead to positive and sustainable energy, vitality, and sense of well-being. Those refer to **Motivational Drivers**.

Extrinsic and Intrinsic Motivation

- Why do we do the things we do?
- What is it that drives our behaviors?
- Psychologists have proposed some different ways of thinking about motivation, including one method that involves looking at whether motivation arises from outside (extrinsic) or inside (intrinsic) the individual.

What exactly do we mean when we say extrinsic or intrinsic motivators?

Cognitive evaluation theory (CET) of motivation indicates that there are two kinds of interconnected motivators to consider:

- **Intrinsic motivators** result from performance of an activity, including responsibility and achievement.

- **Extrinsic motivators** result from environmental factors, including working conditions, pay, and performance evaluations.
Your motivation is influenced by external factors like money, rewards, position, etc...

Extrinsic Motivation

Intrinsic Motivation

The M Factor
Mobilizing Lasting Motivation

Motivation Capabilities

Your motivation is influenced by the extent to which you feel connected to or receive meaning from what you do...

You are capable of identifying what gives and what takes away your motivation...

http://motivationfactor.com/more-about-extrinsic-motivation/

IFCC EMD - Committee on Clinical Laboratory Management (C-CLM)
Extrinsic Motivation

Extrinsic motivation occurs when we are motivated to perform a behavior or engage in an activity to earn a reward or avoid punishment.

Examples of behaviors that are the result of extrinsic motivation include:

- Studying because you want to get a good grade
- Cleaning your room to avoid being reprimanded by your parents
- Participating in a sport to win awards
- Competing in a contest to win a scholarship

In each of these examples, the behavior is motivated by a desire to gain a reward or avoid an adverse outcome.
Intrinsic Motivation

Intrinsic motivation involves engaging in a behavior because it is personally rewarding; essentially, performing an activity for its own sake rather than the desire for some external reward.

Examples of actions that are the result of intrinsic motivation include:

- Participating in a sport because you find the activity enjoyable
- Solving a word puzzle because you find the challenge fun and exciting
- Playing a game because you find it exciting
- Performing extra tasks for patient safety and to improve patient care

In each of these instances, the person's behavior is motivated by an internal desire to participate in an activity for its own sake.
Intrinsic value > extrinsic rewards

Autonomy > Mastery > Satisfaction
Power > Sex > Love
Belonging > Fun
Learning

Threats > Quests
Punishments > Leaderboards
Loss of Power > Rewards
Points > Badges > Levels

“So, it’s agreed – we lay off the stick and hit them hard with the carrot.”

IFCC EMD - Committee on Clinical Laboratory Management (C-CLM)
Extrinsic vs. Intrinsic Motivation: Which Is Best?

Extrinsic motivation can be beneficial in some situations, however:

- External rewards can induce interest and participation in something in which the individual had no initial interest.

- Extrinsic rewards can be used to motivate people to acquire new technical skills or knowledge in the laboratory. Once these early skills have been learned, people may then become more intrinsically motivated to pursue the activity.

- External rewards can also be a source of feedback, allowing people to know when their performance has achieved a standard deserving of reinforcement.
Extrinsic vs. Intrinsic Motivation: Which Is Best?

Extrinsic motivators should be avoided in situations where:

- The individual already finds the activity intrinsically rewarding
- Offering a reward might make a "play" activity seem more like "work"

While most people would suggest that intrinsic motivation is best, it is not always possible in every situation. In some cases, people simply have no internal desire to engage in an activity. Excessive rewards may be problematic, but when used appropriately, extrinsic motivators can be a useful tool. For example, extrinsic motivation can be used to get people to complete a work task or school assignment in which they have no internal interest.

"There’s a $10 cover charge, but the boss wants you to know that he appreciates you."

IFCC EMD - Committee on Clinical Laboratory Management (C-CLM)
Extrinsic vs. Intrinsic Motivation: Which Is Best?

Researchers have arrived at three primary conclusions with regards to extrinsic rewards and their influence on intrinsic motivation:

- Unexpected external rewards typically do not decrease intrinsic motivation.
- Praise can help increase internal motivation.
- Intrinsic motivation will decrease, however, when external rewards are given for completing a particular task or only doing minimal work.
**Type of motivation**

**Amotivation**
- The behavior will not be present because there’s no point in trying or it's impossible to succeed.
- I will not join the gym cause I don’t have time to exercise.
- I will not join the gym because I don’t want to exercise.

**Extrinsic Motivation**
- The behavior will be present for external reasons (avoid negative consequences or gain positive benefits) or because it's important or of value.
- I will join the gym because I want to be fit.
- I will join the gym cause I value health and wellness.

**Intrinsic Motivation**
- The behavior is for internal reasons such as interest, pleasure, enjoyment or satisfaction.
- I joined the gym because I love the group fitness classes.
- I I enjoy going to the gym because I like the environment and the equipment they have.

---

IFCC EMD - Committee on Clinical Laboratory Management (C-CLM)
The Appraisal Process

The appraisal process is at the heart of Employee Work Passion, a higher-order form of engagement in which the individual performs above expectations, uses discretionary effort on behalf of the organization, endorses the organization as a great place to work, acts in ways that are altruistic toward stakeholders, and remains with the organization.

When individuals understand their appraisal process, they can manage it. When leaders understand the appraisal process, they can facilitate their people to manage it more effectively.
The Spectrum of Motivation and The Six Motivational Outlooks

The Spectrum of Motivation model, illustrates that the skill of Optimal Motivation lies in shifting from a suboptimal to optimal Motivational Outlook.

2) A Business Case for Optimal Motivation. © 2016 The Ken Blanchard Companies
Interest Graph of Four Different Player Types

Motivation is not a one-size-fits-all concept. In fact, each of the four player types has different types of motivations.

WHERE DO YOUR EMPLOYEES FIT IN?

According to Gallup, there are three levels of employee engagement that are key indicators of a worker’s satisfaction.

1. ENGAGED: These workers are committed to your company and want to drive innovation.
2. DIENGAGED: These workers lost the passion and energy they once showed towards your organization.
3. ACTIVELY DIENGAGED: These workers have detached from your organization and stopped producing high quality work.

WHEN YOUR EMPLOYEES ARE APPRECIATED AND CAPTIVATED AT WORK...

PRODUCTIVITY GOES UP...
81% of U.S. employees say they’re motivated to work harder when their boss shows appreciation for their work.

AND SO DOES LOYALTY...
53% More than half of U.S. employees report they would stay longer at their company if they felt more appreciation from their boss.

ENGAGED WORKERS WOULD EVEN STAY IF THEY WON THE LOTTERY

If you won $10 million dollars in the lottery, would you continue to work?

The only way to do great work is to love what you do.

~Steve Jobs
## Motivation Theories

**Content Theories**
- Maslow’s Hierarchy of Needs
- Alderfer’s ERG Theory
- McClelland’s Achievement Motivation
- Herzberg’s Two-Factor (Motivation-Hygiene) Theory

**Process Theories**
- Skinner’s Reinforcement Theory
- Victor Vroom’s Expectancy Theory
- Adam’s Equity Theory
- Locke’s Goal Setting Theory

- **Content theories focus on** WHAT, while process theories focus on **HOW** human behavior is motivated.

- **Content theories are the earliest theories of motivation** and also called "needs" theories. They try to identify what our needs are and relate motivation to the fulfilling of these needs.

- **Process theories are concerned with “how” motivation occurs**, and what kind of process can influence our motivation.
Motivation Theories

- No single motivation theory explains all aspects of people’s motives or lack of motives.

- Each theoretical explanation can serve as the basis for the development of techniques for motivating.
Comparison of Content Theories of Motivation

Intrinsic and extrinsic motivators are related to and impact each of the motivation theories is described below.

https://vgpblog.wordpress.com/2015/05/22/generating-value-by-motivating-individuals/

IFCC EMD - Committee on Clinical Laboratory Management (C-CLM)
Maslow’s Hierarchy of Needs Theory

Abraham Maslow’s hierarchy of needs theory defines a need as a physiological or psychological deficiency requiring satisfaction. While a satisfied need is not a motivator, an unsatisfied need influences behavior until fulfilled.

Maslow’s theory is based on two principles:

**Deficit principle** – states that a satisfied need does not motivate behavior since individuals work to satisfy missing needs

**Progression principle** – states that the five needs occur in a hierarchy, meaning lower-level needs must be satisfied first

Maslow’s hierarchy consists of five levels:

**Physiological** – workplace, work hours, comfort

**Safety** – pay, work conditions, benefits, job security

**Belonging** – coworkers, teams, leaders, customers

**Esteem** – status, respect, responsibility, promotion, praise, recognition

**Self-Actualization** – challenge, flexibility, achievement, growth, opportunity, advancement, creativity

Maslow’s theory suggests that the lower-level needs must be met before individuals will desire moving to higher-level needs. Leaders must recognize and understand the five levels of needs to build an organization with a culture of motivation.
Alderfer’s ERG Theory

Clayton Alderfer’s ERG theory is formed on the basis of Maslow’s hierarchy of needs, but collapses five levels into three categories – existence, relatedness, and growth.

Existence – aspirations for material and physical well-being (includes Maslow’s physiological and safety levels)
Relatedness – aspirations for fulfilling relationships (includes Maslow’s belonging and esteem levels)
Growth – aspirations for development of capability, growth, or potential (includes Maslow’s esteem and self-actualization levels)

Existence needs are considered the first level of needs and foundational to motivating behavior. As lower-level needs are satisfied, they become less important; as higher-level needs are satisfied, they become more important. To strive for a culture of motivation, leaders must ensure that individuals’ lower-level needs are met (and no longer important), so that individuals have opportunities to achieve higher-level needs, such as relatedness and growth.

http://www.visionarypsy.com/case-samples
David McClelland’s acquired needs theory acknowledges that individuals prioritize three specific needs differently.

- **Affiliation** – wish to form close, personal, friendly relationships
- **Power** – desire to be in charge; to control and influence others’ actions
- **Achievement** – determination to accomplish something of importance; to excel

Leaders must build and shape an organization that maximizes its results and success based on recognizing and meeting individuals’ needs.
Herzberg’s Two-Factor Theory

Fredrick Herzberg’s two-factor theory is based on the premise that motivation is divided into two factors.

**Hygiene factors** include job security, salary or pay, benefits, policies, relationships, and working conditions. While these factors do not directly motivate individuals, when not present or when taken away, they cause dissatisfaction and complaints.

**Motivators** include achievement, advancement, growth, responsibility, and a feeling of recognition. When present, these factors directly motivate and satisfy individuals; however, when they are not present, they do not dissatisfy.

The two factors have four combinations:

1. High hygiene and high motivation – best situation; results in individuals who have few complaints and are highly motivated
2. High hygiene and low motivation – results in individuals who have few complaints, yet are not highly motivated
3. Low hygiene and high motivation – results in individuals who are dissatisfied, yet highly motivated
4. Low hygiene and low motivation – worst situation; results in individuals who are dissatisfied and not motivated

Since absence of hygiene factors causes dissatisfaction and complaints, and motivators cause satisfaction and high motivation, leaders must ensure that hygiene factors are in place, and then strengthen individuals’ opportunities to experience motivators.
Summary of Herzberg’s Motivator–Hygiene Findings

Work Climate

- Work climate is the prevailing workplace atmosphere as experienced by employees. It is what it feels like to work in a place.

- There are six dimensions to determining whether your organizational climate is set up for success with keeping employees motivated and engaged.
Organizational Climate of Staff Working Conditions and Safety - An Integrative Model*

CULTURE
VALUES
• Senior Leadership
• Professional Subcultures
• Socialization to Organization

CONTEXT
• International Factors
• Industry Factors

10 Major Aspects of Climate and Culture

1) Everything that happens in organizations is a result of climate and culture and everything that happens affects climate and culture.

2) Climate and culture are reciprocally related.

3) Climate and culture are multilevel phenomena.

4) Climate and culture are differentiated phenomena.

5) Organizations have multiple foci for climates and cultures.

6) Organizational culture and climate emerge and can change over time.

7) Leadership is central to climate and culture formation and maintenance.

8) Climate and culture emerge from systems of stimuli.

9) Climate and culture are measurable.

10) Climate and culture can yield competitive advantage.

What are the Indicators of Low Motivation and Performance?

**Signs**

- Absenteeism and tardiness (delay beyond the expected or proper time)
- Decreased productivity
- Disengagement and inflexibility of work habits
- Dissatisfaction among clients
- Failure of a work group to meet specific performance targets
- Frequent or unresolved conflict among staff
- Poor communication among group members and with you as a leader
- Staff resistance to new processes and ideas

**Complaints**

- “This place is so disorganized. We don’t know what direction we are going in. Today, one task has high priority, but tomorrow a different task has priority.”
- “We are asked to produce results, but we don’t have support or necessary resources.”
- “No one appreciates our work. No one says thank you.”
- “We get plenty of criticism when things go wrong, but rarely any positive feedback.”
- “Things are tense and unpleasant. Our supervisor just barks at us. Sometimes I wish I didn’t have to go to work.”

How to Analyze Performance-Motivation Problems

What are the Strategies for Activating Optimal Motivation—Making the Shift?

Leaders who successfully move from mere motivation to the dedication that sustains the optimal outlook go through three stages:

1. Intention Formation
   - Identify opportunities, describe the task or goal - the current Motivational Outlook by recognizing and understanding how one’s psychological needs for Autonomy, Relatedness, and Competence are being satisfied.
   - Create an emotional link
   - Visualize the intention

2. Crossing the Rubicon (crossing the point of no return)
   - Deal with doubts and anxieties - use self-regulation Mindfulness, Values, and Purpose-shifting strategies.
   - Exercise conscious choice
   - Take personal responsibility

3. Intention Protection
   - Control the context - reflect on the shift, noticing the difference between having a suboptimal and an optimal Motivational Outlook.
   - Regulate cognition - Reflect on the key reasons for shifting (or not shifting)
   - Manage emotions
   - Protect self-confidence - Reframe the task or goal

2) A Business Case for Optimal Motivation. © 2016 The Ken Blanchard Companies
Motivation Cycle

- Recognize an individual’s deficiency of needs
- Collaborate with individual to define a plan to fulfill his/her needs
- Execute plan to fulfill needs
- Monitor individual’s motivation level
- Provide feedback to/solicit input from individual; adjust plan as necessary

https://vgpblog.wordpress.com/2015/05/22/generating-value-by-motivating-individuals/
What is a Leader’s Role in Activating Optimal Motivation with Others?

To take full advantage of the science of motivation, leaders need to understand:

► Leaders cannot motivate anyone. What they can do is shape a workplace where people are more likely to experience optimal motivation at work.

► Sustaining high-quality motivation as a strategic capability creates a magnet for talent. By asking themselves “What do I want for my people?” rather than “What do I want from them?” leaders can create a dynamic culture shift.

► Despite a job description that may hold them accountable for motivating their people, leaders must recognize that individuals are already motivated; they are always motivated. The leader’s role is to help individuals explore why they are motivated, uncover the reasons for their current Motivational Outlook, and then use best practices to help facilitate people’s shift to a more optimal Motivational Outlook.
"Winning isn’t Everything but Wanting to Win is"

Vincent Lombardi
What are the things laboratory leaders must do to help individuals activate optimal motivation?

<table>
<thead>
<tr>
<th>What doesn’t work</th>
<th>What works</th>
<th>How to Do it</th>
</tr>
</thead>
</table>
| 1. Apply pressure; Demand Accountability | Encourage Autonomy | Invite choice; illuminate boundaries; explore options within boundaries  
Present goals and timelines as valuable information necessary for achieving agreed-upon outcomes  
Help reframe goals as relevant |
| 2. Ignore feelings | Deepen relatedness | Show empathy and caring; acknowledge and validate people’s emotions  
Offer pure and informational feedback rather than personal or evaluative praising  
Share information about yourself and the organization; discuss your intentions openly |
| 3. Discount learning | Develop competence | Emphasize learning goals, not just performance goals  
Ask, “What did you learn today?”  
Provide training and appropriate leadership style for the person’s level of development |
| 4. Enable sabotaging behaviors | Promote mindfulness | Encourage self-reflection  
Ask open-ended questions that illuminate options  
Facilitate the generating of options and alternative implementation strategies |
| 5. Rely on power | Align with values | Help individuals align goal to their work-related value(s)  
Explore natural interest in and enthusiasm for the goal  
Recognize mistakes as part of learning and growth |
| 6. Focus on metrics without meaning | Connect to purpose | Help individuals connect the goal to their work-related or life purpose  
Frame actions in terms of the welfare of the whole; focus on contribution to the greater good  
Provide rationale and big picture |

Top 10 Ways to Motivate Staff

- Keep Staff Informed
- Involve Staff in Decision Making
- Recognize, Reward, and Promote High Performance
- Provide Specific and Frequent Feedback
- Create a Partnership with each Employee
- Encourage to Learn New Skills and Develop
- No Blame, No Shame
- Be Open and Built Trust
- Meet and Listen
- Personally Thank
- Celebrate Successes

IFCC EMD - Committee on Clinical Laboratory Management (C-CLM)
What are the benefits of motivating individuals?

- Reduce costs and turnover
- Increase individuals’ satisfaction
- Increase quality, productivity, customer satisfaction
- Provide an environment to ensure strategies are successful
- Provide a collaborative environment and sense of belonging
- Increase success of organization’s strategies and metrics
- Increase focus, attention, energy toward organizational goals

https://vgpblog.wordpress.com/2015/05/22/generating-value-by-motivating-individuals/
12 Most Exalting Phrases Leaders Share with their Teams

1. You were right about.....
2. I’m glad you are here
3. I trust you
4. You earned it
5. Let’s have some fun
6. I believe in you
7. That is interesting
8. How can I help?
9. What do you think?
10. Come on in
11. Thank you for.....
12. Have a great day!

And once is never enough. Motivation doesn’t last forever. Zig Zaglar says it’s a lot like showering in that respect.....that’s why he recommends it often!

www.GreatResultsTeambuilding.com
“People often say that motivation doesn’t last. Well, neither does bathing – that’s why we recommend it daily.”

Zig Ziglar
Extrinsic motivation and intrinsic motivation are both important ways of driving positive behavior. To comprehend how these can be best utilized, it is important to understand some of the key differences between the two types of motivation including the overall impact that each can have on behavior.

Your responsibility as a laboratory leader is to develop your team so that it can take on more and more of your own responsibility. A mature team should be virtually self-managing, leaving you free to concentrate on all the joint enhancing strategic aspects that you yourself need in order to keep motivated and developing.
Although there is not a single, magical solution for motivating individuals, careful consideration of each of these motivation theories and how they might be applied to build and shape a highly motivated organization will most certainly result in benefits and rewards to all.

A positive work climate leads to and sustains employee motivation, high performance, and better results in the clinical laboratory. Good leadership and management practices contribute to a positive work group climate.

The methods for leading help you guide staff in group decision making and foster commitment.
Self-Assessment – (1)

► What is the 'primary aim' of your laboratory/department or organization?
  How clear are you about your laboratory/department or organization's principles, priorities and mission.

► What obstacles or challenges stop you performing to best effect?

► What really motivates you and/or your staff?
  Are you motivated by financial rewards, status, praise and acknowledgment, competition, job security, public recognition, fear, perfectionism, results, etc.

► What makes you feel empowered?

► Are there any recent changes in your laboratory/department or organization that might have affected your motivation?
  If your laboratory/department or organization has made redundancies, imposed a recruitment freeze or lost a number of key employees this will have an effect on motivation.
Self-Assessment – (2)

► As a leader, did you explore what motivates your staff and why they are motivated?

► What are the patterns of motivation in your laboratory/department or organization?
  Who is most motivated and why?

  What lessons can you learn from patches of high and low motivation in your laboratory/department or organization?

► Are employee goals and laboratory/department or organization’s goals aligned?
  You may find employees are highly motivated but about the "wrong" priorities.

► How do you feel about your laboratory/department or organization?
  Do you feel safe, loyal, valued and taken care of? Or do you feel taken advantage of, dispensable and invisible?

  What would improve your loyalty and commitment?

► Do you have an appraisal process in place in your laboratory/department or organization?
Self-Assessment – (3)

- How involved are you in laboratory/department or organization development?
  Do you feel listened to and heard?
  Are you consulted? And, if you are consulted, are your opinions taken seriously?
  Are there regular opportunities for you to give feedback?

- Is your laboratory or organization 's internal image consistent with its external one?
  Your laboratory or organization may present itself to the world as "a nationwide leader in innovative laboratory research and development", "a global reference laboratory" or the "best clinical laboratory service". You would have been influenced, and your expectations set to this image when you joined this organization. If you do not mirror this image within your organization in the way you treat employees you may notice motivation problems.
  Find out what the disparity is between the employees image of the organization from the outside and from the inside.
The Motivational Pie Chart Activity

(Modified from idea by Jennifer Dulski, at change.org)

The best way to keep people happy at work is to start directly asking *all* the people on your team to share what motivates them.

To do so effectively, you can use this tool.
